

PFAS Exposure Assessments

Provide Information to Protect Our Community

CDC/ATSDR staff will meet with community members and answer questions about the exposure assessments.

Households will be randomly selected and invited to participate.

Participants will provide blood and urine samples. A sampling center will be set up in the community.

Environmental samples will be collected from some participant's homes.

CDC/ATSDR staff will host a **community event** to discuss results.

CDC/ATSDR will **review all the results** and write a report describing their findings and recommendations.

Individual **test results** will be sent to participants.

Environmental and blood and urine **samples will be analyzed** at a lab.
